Roadmap	10

Emerald Trade, Inc. was formed as a Florida limited-liability company in August 2016. In the past, it merged buyers and sellers of emeralds. In December 2019, the company was converted into a corporation. Emerald Trade is now a holding company for emeralds held in Bank of America vaults for safekeeping, as well as an asset-backed digital currency and management company. Moreover, its business consists of purchasing at a significant discount premium-quality cut emeralds from reputable, vetted sellers in the major mining countries.

Gold, silver, and diamond markets have been securitized and have reached global saturation and market growth maturity. It means that the global demand for production has reached the ebb-and-flow balance of supply and demand. The emerald market has only recently been securitized/tokenized and made its way to public stock exchanges and the cryptocurrency domain. Its entry into the market as an asset-backed token (ABT) has found favor with investors. Due to the rapid growth of consumer wealth, especially in Asian countries where emeralds are preferred over diamonds, the growth potential for tokenizing the emerald market is monumental and decades away from reaching the saturation levels that gold, silver, and diamonds have reached. The global demand for emeralds substantially exceeds current production. In the past 20 years, emeralds' rise in value outpaced the average price increase of gold, silver, and diamonds. Emeralds have been known to increase in value at an average of 12% to 15% annually. Emerald Trade is making participation in this expanding market available to investors worldwide through digital currency.

FuraCoin's Future Outlook

Initially, FuraCoin will be a utility token, with a total supply of 600 million tokens. There are currently 300 million FuraCoin tokens created which are located on Etherscan. It is part of our plan to create 300 million more FuraCoin tokens to complete the figure of 600 million FuraCoin Tokens that establishes the total supply.

Additionally, we will accumulate sufficient funds over time, with the ultimate goal of transitioning from a utility token to a currency by establishing our own blockchain network. This will allow us to transact on our own network, which will allow us to have lower fees, expedited transaction times, and support for other ABTs via other stablecoins. As exceptional as the Ethereum blockchain is and how widely used it is in the digital currency

space, most things do not come without flaws. If FuraCoin were to rely solely on the Ethereum network and massive traffic issues arose, the conduct of our business could be limited. It would be foolish not to have our own blockchain network in case of a catastrophe. We hope to achieve the same results with emeralds that we intend to achieve with other precious stones/metals in the future through our own blockchain network.

Problems

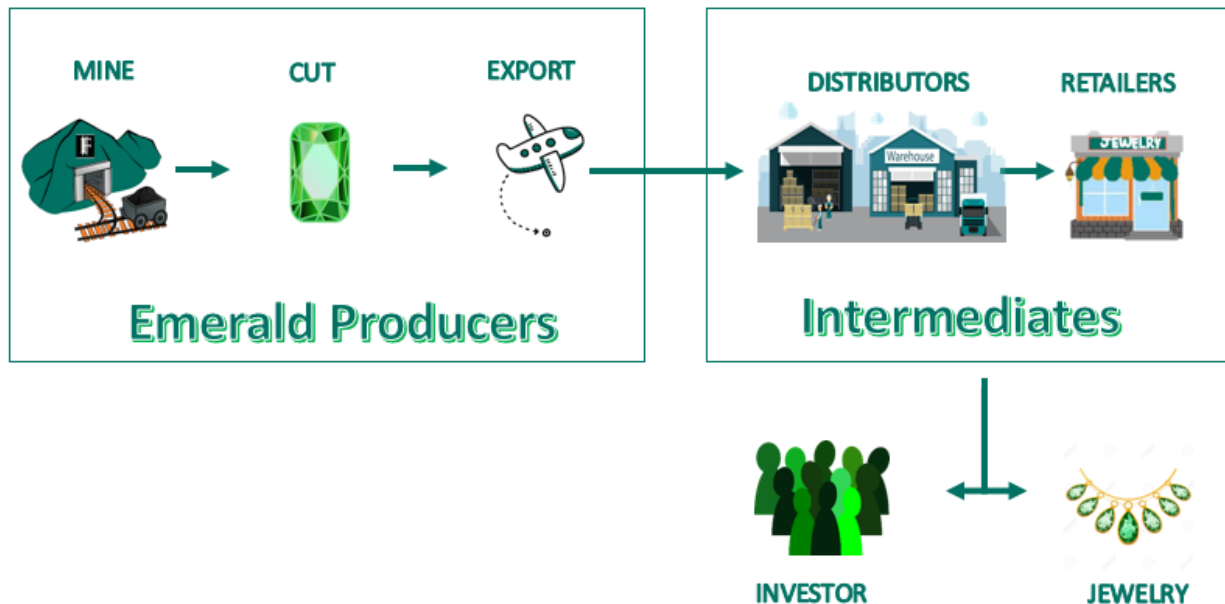

The process that an emerald goes through before reaching the investor or retailer hands may take an extended amount of time and is overall a tedious step. From its discovery in mines around the world, to the final holder (buyers), presents a multitude of different problems for both the consumers and producers, as illustrated below:

Problems on the Consumer's side:

- ❖ Moderate to high prices.
- ❖ Investing and purchasing emeralds can sometimes be difficult and risky, especially if you are a first-time buyer/investor who does not have adequate knowledge about them.
- ❖ Partial and small investments are not possible when obtaining emeralds.
- ❖ Lack of trust in the emeralds' origin due to illegal trafficking and proliferation of lab-grown gems.

Problems of the Producer's Side:

- ❖ Receiving less than 30%-40% of the final customer retail price.
- ❖ It's extremely difficult for miners and producers to expand into different markets because of lack of advertisement and brand awareness.

Solutions

Emerald Trade realized there was an opportunity for investors, traders, and producers to participate in a more decentralized market and reduce the costs of transactions between parties. Furthermore, Emerald Trade wants to eliminate the middleman from the process, connecting retailers, traders, and investors directly with the miners. As the global financial system progresses, a multitude of problems arise, preventing users from getting the best experience possible. One of the issues that users are currently facing is the inability to access guaranteed financial services. Unfortunately, the majority of investment methods that users wish to utilize are discouraged due to the inevitable financial consequences imposed by governments.

Another underlying problem is that high-quality emeralds are a unique and exclusive investment that, historically, have only been accorded to wealthy and prestigious individuals instead of ordinary people in society. FuraCoin is here to bridge the gap by taking these difficult-to-attain precious stones and granting an opportunity to investors who believe in our mission and the future of emeralds as a world-renowned asset. In 2008, the world faced its worst financial recession since the Stock Market Crash of 1929. During this time, investors and ordinary citizens lost faith in their nation's currency and turned to alternative methods to store their hard-earned money into a new system of digitally backed currency and avoid the hassle of government regulations imposed on average citizens worldwide.

On January 3, 2009, the Bitcoin network came into existence, reliant on blockchain technology backed by miner-investors who use their computers to solve the mathematical algorithms that make the blockchain system function. Bitcoin proved its worth during this historical time because it solved the middleman dilemma, dramatically cutting transaction costs and opening the doors to transparency between users. Bitcoin is now recognized by the world's most prestigious organizations and financial institutions as a reputable digital currency due to its revolutionary design system and structure—the first major digital currency utilizing blockchain technology. Although FuraCoin will not be using Bitcoin blockchain technology, the concept behind the development of Bitcoin inspired Emerald Trade to create a decentralized market for the emerald industry.

The market for cryptocurrencies and digital blockchain assets has developed into a vibrant ecosystem of traders, investors, and speculators exchanging millions of blockchain assets around the world. Unfortunately, cryptocurrency prices are historically volatile, rising and falling rapidly. Furthermore, the majority of cryptocurrencies have wide swings (large and frequent price fluctuations throughout the day, week, month, etc.) from day to day, which is common in the cryptocurrency realm. Some people find the volatility vital to the growth and interest in cryptocurrencies, while others see it as a problematic issue, as well as the reason why countless cryptocurrencies have failed to fulfill vital roles, such as viability and functionality as cryptocurrencies. An ABT's value is relatively stable due to the nature of the asset that its value is pinned to, so it is definitely a superior choice

for investors who wish to hold an asset that has appreciated throughout historically uncertain times.

FuraCoin is an ABT, which means tokens will be backed 100% by physical emeralds.

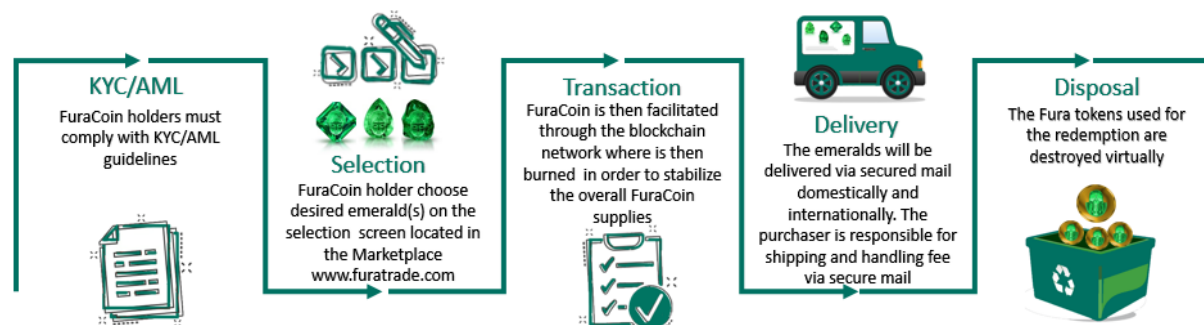

NAME	TICKER	PLATFORM	DECIMAL PLACES
FURACOIN	FURA	ETHEREUM ERC20	18

IEO Distribution

STAGE	DATE	TOKENS LIMIT	BONUS
PUBLIC SALE	JUNE 27, 2022	10,000,000	20%

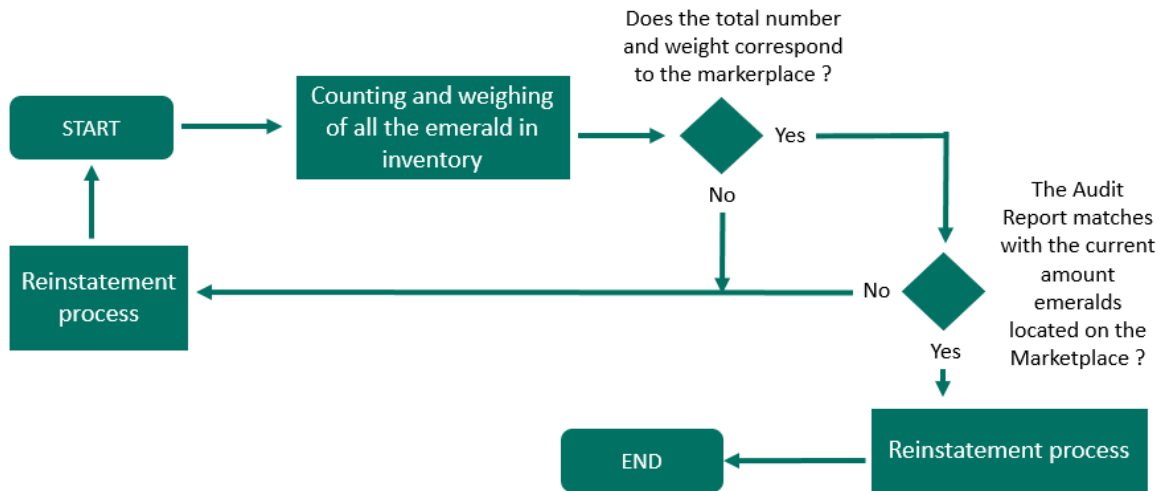

Redemptions Process.

The owners of Fura can redeem their tokens for emeralds through the website www.furatrade.com. Owners of FuraCoins can redeem their tokens twice a year. The first redemption round starts from May 18th to June 18th (2023) and the second redemption round starts from November 18th to December 18th (2023). Individuals who purchase FURA can go to the website to view each emerald’s most recent price, alongside its copy of the GIA certificate and other related government documentation. The redemption process is composed of the following steps:

Audit

To reinforce the transparency of the process, a bi-yearly audit is conducted by a trusted third party to verify the authenticity and quality of the emeralds.

Supply and IEO (Tokenomics)

The total supply is 600,000,000 FURA units and supply divisibility will be according on

- ❖ Company Reserve 4% (24,000,000 FURA)
- ❖ Team 8% (48,000,000 FURA)
- ❖ Legal Fee 3% (18,000,000 FURA)
- ❖ Platform Maintenance 3% (18,000,000 FURA)
- ❖ Bounty 3% (18,000,000 FURA)
- ❖ Public Sale 43% (258,000,000 FURA)
- ❖ Private Sale 10% (60,000,000 FURA)
- ❖ Ecosystem 3% (18,000,000 FURA)
- ❖ Marketing & Listing 20% (120,000,000 FURA)
- ❖ Advisors 3% (18,000,000 FURA)

Token Specification

NAME	SYMBOL	BASED ON	TOTAL SUPPLY	DECIMALS	CONTRACT ADDRESS
FURACOIN	FURA	ERC-20	600,000,000 FURA TOKEN	18	0XE1631864495A2251AE092D678111ACE32EE28AD4

Sales Events

PUBLIC SALE	PRIVATE SALE	TOTAL
43%	10%	53%

Ecosystem

3% of the total supply can be used for research development, improving infrastructure, and anything that helps the company improve the ecosystem growth and longevity.

Anti-dump mechanism

Emerald Trade understands the potential risks of dumping into the circulating supply, which is why we set up a vesting period to help prevent individuals from diluting the market.

Vesting Period

The above vesting period is in place to prevent the groups from diluting the market. The vesting period doesn't imply to public sale participants, legal fee and Platform Maintenance.

Team	8%	6 months fully locked, then unlock over 18 months
Private Sale	10%	Released at TGE, 3 months cliff then linear vesting over the next 12 months
Advisors	3%	6 months fully locked, then unlock over 18 months
Company Reserve	4%	Unlock over 48 months, then linear vesting over the next 12 months
Marketing & Listing	20%	Released at TGE, then linear vesting over the next 24 months
Bounty	3%	Released at TGE, then linear vesting over the next 24 months
Ecosystem	3%	Spread over the first month, then linear vesting over the next 24 months

FuraCoin is considered a disinflationary currency. The term disinflation is used to describe the slowing of price inflation. In other words, disinflation is the decrease in the rate of inflation.
